

systemc ergo XT

Perfect ergonomics for your shopping carts

Ergonomic

The upright design of the ergo XT ensures a natural and ergonomic position of hand and wrist. Pressure is taken off the wrists compared to a conventional shopping cart handle. It is the arms not the wrists that are doing the job, even fully loaded shopping carts are much easier to maneuver.

Great look

The ergo XT's not only offer greater ease of use, they also make the shopping cart look great. With the fresh design of the ergo XT, an ordinary shopping cart looks really stylish and modern. The ergo XT can be fitted to all standard shopping cart models.

Antistatic

The problem is well known: static charge on shopping carts builds up and leads to unpleasant shocks when touching the cart. systemc's new antistatic built-in technology prevents this from happening. Two antistatic inserts on each side ensure, that whenever a customer is pushing the shopping cart with the new systemc ergo XT's, it will be de-charged.

Easy mounting

The ergo XT is attached with only two screws. The system is designed so that the shopping cart handle remains fully intact. The shopping cart fleet can be retrofitted quickly and easily at any time.
